

Mike Hoskins

Senior Site Reliability Engineer | Senior Infrastructure Engineer | AWS, Kubernetes, Terraform
Lexington, KY (remote) | me@deadlysyn.com | deadlysyn.com

PROFESSIONAL SUMMARY

Senior Site Reliability and Infrastructure Engineer with nearly 30 years of experience building, scaling, and operating mission-critical systems on AWS. Deep expertise in Kubernetes/EKS, Terraform and infrastructure as code, GitOps delivery (ArgoCD, Helm), and SLO-driven reliability practices, most recently supporting a 60+ cluster EKS platform. Seasoned incident responder who has led 1,000+ incidents and built incident management processes from scratch.

CORE SKILLS

AWS: EC2, EKS, Elastic Beanstalk, VPC, IAM, S3, Route 53, Lambda, API Gateway, WAF, Elastic Load Balancing, ALB, NLB, RDS, Aurora, DynamoDB, ElastiCache, CloudWatch

Containers and Orchestration: Kubernetes, Amazon EKS, Docker, Helm, Kustomize

Infrastructure as Code: Terraform, OpenTofu, Terragrunt, Packer, Ansible, Puppet, SaltStack, CFEngine

CI/CD and GitOps: ArgoCD, GitHub Actions, GitLab CI, CircleCI, Jenkins, Concourse, Drone

Observability: New Relic, Datadog, Prometheus, Grafana, CloudWatch, ELK, Graphite, Nagios, Sensu

Reliability and Incident Response: SLOs and SLIs, incident management, on-call operations, postmortems, PagerDuty and the PagerDuty Incident Response framework

Core Infrastructure Services: Linux/UNIX, load balancing, DNS, SMTP, LDAP

Programming and Scripting: Python, Go, Bash, JavaScript, Node.js

Data Stores: PostgreSQL, MySQL, Redis, Amazon Aurora/RDS, DynamoDB, ElastiCache

Practices: Site Reliability Engineering, DevOps, GitOps, Infrastructure as Code, Agile, Lean

PROFESSIONAL EXPERIENCE

Staff Site Reliability Engineer | Assured | April 2024 – September 2026

- Contributed Terraform, Terragrunt, and ArgoCD manifests to migrate 60+ clusters from Elastic Beanstalk to Amazon EKS, letting new services ship as pods instead of new environments, cutting cost and speeding delivery.
- Owned ongoing EKS cluster and ArgoCD upgrades for the platform.
- Delivered new services through GitOps pipelines built on ArgoCD and Helm.
- Established the company's SLO practice from the ground up: identified ~30 customer-critical key transactions, instrumented the Node.js application, and codified the SLIs and SLOs in New Relic using Terraform.
- Created and documented an "embedded" program that partnered SREs with product teams to build SLOs themselves rather than have them built for them; piloted it with one team new to SLOs, then defined the repeatable pattern that grew adoption to ~20 teams.
- Set infrastructure as code strategy for the organization, evaluating Terraform vs. OpenTofu, Terragrunt, Boilerplate, and Terraform automation and collaboration (TACO) tooling.
- Led migration of the observability platform's data to improve scale and align with industry best practices.

Senior Site Reliability Engineer | Lattice | April 2022 – December 2023

- Built reusable Kubernetes/ArgoCD templates and a menu-driven script that let junior engineers generate a working service in minutes, cutting PR turnaround from a day to under an hour (8x).
- Enabled rapid adoption of new architecture patterns, particularly microfrontends, on a platform that previously ran only a few backend services.
- Deployed ArgoCD to orchestrate deployments across a complex web of monolith and microservice dependencies.

- Scaled the global Kubernetes footprint while meeting the demands of a complex regulatory environment.

Senior DevOps Engineer | Sonatype | January 2020 – March 2022

- Built an employee onboarding service that wrapped HR, IT, security, and operations tasks into a single button and report, onboarding 100+ managers, salespeople, and engineers during a period of rapid growth; saved 4–8 hours per week of manual account and permission work while adding consistency and an audit trail.
- Built a self-service API that let teams manage their own AWS access, used daily by ~10 development teams and eliminating ticket wait times.
- Scaled and secured core infrastructure services and developer tooling.

Senior Site Reliability Engineer | Pivotal Labs (acquired) | January 2018 – December 2019

- Developed the SRE curriculum used for internal and customer training.
- Kept Fortune 100 digital transformation programs on schedule and on budget.
- Automated deployment of PaaS and cloud-native applications across AWS, GCP, Azure, and vSphere.

Infrastructure Architect | Cisco, Security Technology Business Unit | 2007 – 2017

- Deployed CFEngine and migrated ad hoc deployments to it, bringing consistent configuration management to all environments and services; later migrated the estate to Puppet.
- Deployed core services (load balancing, DNS, SMTP, and LDAP) from scratch in new data centers, scaled them as the business grew, and kept them updated in the face of security threats.
- Built an incident management process from scratch, well before such practices became industry standard, and continuously refined it; a documented, socialized, and taught process reduced MTTR by ~20–25% on average (for example, ~60 to ~45 minutes).

Earlier Experience | Infrastructure and Systems Engineering | 1997 – 2007

- Senior Infrastructure Engineer, IronPort (acquired) (2006 – 2007)
- Senior Infrastructure Engineer, E2open (2004 – 2006)
- Technical Operations Manager, Televoke (acquired) (2000 – 2004)
- UNIX Systems Engineer, QWEST (1999 – 2000)
- UNIX and Network Administrator, SEI Data (1997 – 1999)

TRAINING

- HashiCorp: Vault Operations Professional (2023)
- HashiCorp: Vault Associate (2022)
- HashiCorp: Terraform Associate (2021)
- Certified Kubernetes Administrator (CKA), Cloud Native Computing Foundation (2020, expired)
- AWS Certified DevOps Engineer – Professional (2020, expired)
